

Dear Parents/Carers,

I am writing to inform you that the below Relationship, Sex and Health Education scheme of work will be taught as part of the PSHE curriculum. During this academic year, your child is going to have lessons in the following areas:

Reception	Growing up: how we have changed since we were babies.
Year 1	Boys' and girls' bodies; correct names for body parts.
Year 2	Boys' and girls' bodies; body parts and respecting privacy (which parts of the body are private and why this is).
Year 3	How babies grow and how boys' and girls' bodies change as they grow older. Introduction to puberty and menstruation.
Year 4	Internal and external reproductive body parts. Recap about puberty and menstruation. Conception explained in simple terms.
Year 5	Puberty for boys and girls in more detail including the social and emotional aspects of becoming an adolescent. Conception explained in simple biological terms.
Year 6	Puberty for boys and girls revisited. Understanding conception to the birth of a baby. Becoming a teenager.

Why is this RSHE curriculum needed?

There are four main aims for teaching RSHE within the context of Primary School PSHE (Personal, Social, Health Education):

- More than ever before, children are exposed to representations of sex and sexuality through the social culture around them. The unregulated content on the internet or social media, can mean children may be exposed to dangerous, confusing or scary content. We can prepare them for this by presenting a balanced view of positive healthy relationships to help them to be discerning and to stay safe.
- There is much independent research showing most parents and carers value the support of schools in providing Relationship and Sex Education for their children. Parents and schools want children to be safe and happy.
- A range of independent research consistently shows that effective Relationship Education delays first sexual experience and reduces risk-taking in young people.
- Surveys of children and young people, as well as Ofsted, have repeatedly said that Relationship and Sex Education tends to be "too little, too late and too biological". This is one of the many reasons why the Department for Education is making Relationships and Health Education compulsory in primary schools from September 2020, with an emphasis on Relationships Education.

If in the unlikely event you do not wish for your child to participate in this aspect of the curriculum, please inform the class teacher and provision will be made for your child to spend the time with another class.

Thank you for your support.

Miss Downing

PSHE Lead

How can I talk to my child about relationships, puberty and human reproduction?

What children learn at school is only part of the curriculum, and children can continue to learn from you at home. For some parents/carers, it can feel totally natural to discuss relationships, puberty and human reproduction with their child, while for others it can seem uncomfortable. Either way, it is important to remember these key points:

- We all want children to be safe, healthy and happy.
- We need to consider their needs and the world they inhabit.
- We need to normalise talking about relationships, puberty and human reproduction to ensure children feel they can talk to parents/carers about any concerns or worries they may have.
- We may need to challenge our own ways of thinking about how we feel about relationships and sex education.
- We have choices. We can avoid talking about relationships and puberty or we can communicate openly and honestly with children. Here are some tips for talking to your child:
 - Be honest. If you don't know the answer to a question, be honest and say so. Tell your child that you will need to find out and that you will get back to them with more soon.
 - Remember that children are curious and want to know and understand. We tend to place our adult perspective on children's questions and comments, when actually a child just wants (and needs) a very simple, age-appropriate, matter-of-fact answer. This answer will not involve an 'adult' understanding of a topic – it needs to be at a child's level, with opportunity given for the child to be able to ask further questions if needed. Give yourself time to respond by asking something like, "What do you think that means?" or "Why do you ask?"
 - Keep lines of communication open. Having an open and honest relationship with your child can really help make conversations easier, so make sure that you are always willing to talk when your child needs you; if you can't, explain why and find another time when it is more mutually convenient.
 - Use correct terminology. It helps that children aren't confused by hints, euphemisms and innuendo; use correct terminology whenever you can, especially for body parts. This is hugely important for safeguarding too.
- Respond to what children say they need. Bear in mind that children's lives today are very different from even five years ago. Therefore, the education they receive needs to reflect this. Research shows us that children want and need to understand relationships, puberty and human reproduction, and want to be able to talk with parents/carers about this when they have had lessons at school. We may feel that they know too much, when actually ignorance is the enemy of innocence.
- Answer questions and don't be afraid to say, 'I really don't know – let's work it out or look it up together'. Have a phrase for awkward moments, such as, 'That's a good question, and let's talk about it once we get home'.
- Always respond. If you don't, they may think it is wrong to talk to you about relationships, puberty or human reproduction and as a result you may find your child clams up when you want to raise the subject, now or in the future.
- If it all feels too personal, try talking about people in books, films and favourite television programmes.
- Enjoy it. Laugh with each other!
- Work in partnership with the school.
